

Tips for Running LightSide on PC

1. Install a Java version between Java 1.8 and Java 17 if not already installed:

Note: *LightSide is likely to work with Java versions greater than Java 17 as they become available. It has not yet been tested beyond Java 17.*

- a. Link: <https://www.oracle.com/java/technologies/downloads/>

2. Run LightSIDE.

File Explorer method – If this method doesn't work for you, try the Terminal Method below.

- a. Open a Finder window.
- b. Navigate to the directory where LightSide is installed – the same directory that this document is in. E.g., Desktop\Lightside.
- c. Double-click file LightSide.bat. If you get a message that it is from an unidentified developer, approve it.

Terminal Method

- a. In a terminal window, navigate to the directory where LightSide was downloaded (or if you moved it, where it is installed) – the same directory that this document is in. E.g.: `cd Desktop\LightSide`
- b. Enter: `.\LightSide.bat`. (Include the period "." at the beginning of the command.)
